Preface

This publication is version 0 of the codebook of the second Wave of the Netherlands Kinship Panel Study (NKPS). For background information on the NKPS, we refer the reader to the Wave 1 codebook (version 1, *NKPS Working Paper No. 4*). The current data release pertains to primary respondents only (so-called ‘Anchors’).

A number of changes were introduced in Wave 2 (see chapter 2 for details). The most important change is that the NKPS no longer consists of two separate samples. In Wave 2 the same data collection methods were organized for the ‘main’ (also described as NKPS-sample) and ‘migrant’ (also described as SPVA-sample) samples. Their data are combined into one large data file (N = 6670). In Wave 1, the questionnaires for the two samples were not fully compatible (for details, see Appendix 2 and section 12.2 of the Wave 1 codebook, version 1), a problem that has now been redressed.

An updated version of the Wave 2 codebook is planned for the spring of 2008. The updated version will have data from family members (so-called ‘Alters’), and from a larger number of primary respondents. The fieldwork for the family members is still in progress, whereas a final sweeping is taking place in the fall of 2007 to reach primary respondents who have not yet been contacted in the second Wave (for details see section 5.13) .

We report on the data-collection of the second Wave as thoroughly as possible. Nevertheless, we cannot rule out the possibility that problems will be detected in the data. We encourage users to report all errors and anomalies that they discover.

The Hague, October 2007.

1 Contributors

The Netherlands Kinship Panel Study is a collaborative effort of six social scientists. The team members are: Pearl Dykstra (director, Netherlands Interdisciplinary Demographic Institute (NIDI) / Utrecht University), Matthijs Kalmijn (Tilburg University), Trudie Knijn (Utrecht University), Aafke Komter (Utrecht University), Aart Liefbroer (Netherlands Interdisciplinary Demographic Institute / Vrije Universiteit, Amsterdam), and Clara Mulder (University of Amsterdam).

Fieldwork coordination has been in the hands of Sylvia Commandeur and her successor Niels Schenk, whereas Mathieu Starink is the automations specialist (all at the Netherlands Interdisciplinary Demographic Institute).

The NKPS has benefited from the contributions of a large group of people. The following PhD-candidates and postdocs provided assistance in carrying out the Wave 2 fieldwork and preparing the data files: Renske Keizer and Anne van Putten (at the Netherlands Interdisciplinary Demographic Institute), Freek Bucx, Willem Huijnk and Arieke Rijken (at Utrecht University), Marjolijn Blaauboer, Edith de Meester, Francesca Michielin and Annika Smits (at the University of Amsterdam), Joris Brekelmans and Jannes de Vries (at Tilburg University), and Teun Geurts (at the Vrije Universiteit, Amsterdam). Fieldwork assistance was also provided by Martijn Hogerbrugge (trainee at the NIDI), and Suzanna Rechtiijt (research assistant at the University of Amsterdam). Help with financial accounting was provided by Vanessa Hage and Hans Uytenhout of the NIDI. Secretarial support was provided by Tonny Nieuwstraten and Jacqueline van der Helm of the NIDI.

The groundwork for developing a large-scale study on families in the Netherlands was laid by Jenny Gierveld (Netherlands Interdisciplinary Demographic Institute), who is a member of the NKPS Scientific Advisory Council. Other Dutch members are: Wim van Oorschot (chair, Tilburg University), Manuela du Bois-Reymond (Leiden University), Christine Brinkgreve (Utrecht University), Harry Ganzeboom (Vrije Universiteit Amsterdam), Paul de Graaf (Tilburg University), Louk Hagendoorn (Utrecht University), Pieter Hooimeijer (Utrecht University), Kees de Hoog (Wageningen University), Kees Knipscheer (Vrije Universiteit Amsterdam), Tom Snijders (Groningen University), Justus Veenman (Erasmus University Rotterdam), and Wilma Vollebergh (Utrecht University). Current international members of the Scientific Advisory Council are: Sara Arber (University of Surrey), Gunhild Hagestad (Agder University College), Johannes Huinink (Bremen University), Martin Kohli (European University Institute, Florence), Eva Lelièvre (Institutut National d'Etudes Démographiques, INED), Judith Seltzer (University of California - Los Angeles), Elizabeth Thomson (University of Wisconsin - Madison) and Alan Walker (The University Sheffield).

The fieldwork for the main study was carried out by Growth for Knowledge Panel Services (GfK PS). Staff members who contributed to the NKPS include Liesbeth Dufornée, Frans Louwen, Peter Willems and Stephan Santegoets. GfK PS carried out the fieldwork for the migrant sample in collaboration with Dufec (Sandra Emons) and ERC-Research (Haluk Arslan).

Over the course of the fieldwork services were provided by Melanie van Haaren (graphic design), Gijs Zuijderduijn and Egidio Tambani of ANDO (printing), Mark Leijdekker of Cendris (address sample), Liesbeth Niemans of Cendris (data entry), Carl Bosboom jr of Bosboom (mailing, handling), Hendrik Latuheru of Bosboom (handling), Henk Bours of Texpertise (Turkish and Arabic translation), Willemien Kneppelhout (English translation), and Gijsbert Brunt of Höcker Rueb Doeleman Advocaten (legal advice).

2 Differences between Wave 1 and Wave 2

2.1 Main and migrant samples

In Wave 1 two separate data collection efforts were organized: one for the main sample (a cross-section of the Dutch population) and one for the migrant sample (Moroccans, Turks, Surinamese and Antilleans). We did so at the time because of the possibility of cooperating with SPVA (Sociale Positie en Voorzieningsgebruik van Allochtonen), the periodic Social Position of and Use of Welfare Provision Facilities by Migrants survey. A drawback of the separate data collection efforts was that the questionnaires were not completely compatible for the two samples. We therefore decided to organize a single, combined data collection during the second Wave. Wave 1 information that was lacking for the migrant respondents has been collected in Wave 2 so that comparable data are now available for both samples.

2.2 Questionnaire content

The questionnaires in Wave 2 focus on the changes that have taken place in the lives of the respondents and their families since the first Wave. A fairly unique element is that we used preloading, i.e. we included information about the respondent's situation at the time of the first interview in the computer-assisted questionnaire (see 3.1.1). Where appropriate, the respondent is asked whether the Wave 1 information is correct and whether changes have taken place since that time. The checks improve the quality of the data.

In response to suggestions made by users of the NKPS data, more questions have been included about educational, employment, and residential history, divorce, attachment to parents at age 15 and parental abuse at age 15. New questions are asked about selected family members. In wave 2 a question about frequency of contact via text messaging or chatbox was introduced for the Anchor's biological father and mother. In wave 2 we also ask about supportive exchanges with the current partner of the parents in the event the current partner is not the Anchor's biological father or mother (i.e. "step-parent"). Questions on problems in the lives of selected family members since Wave 1 have also been added (psychological problems, delinquency). See Appendix 5 for a list of all the new questions in Wave 2.

2.3 Mixed method

Another change is that the data were no longer exclusively gathered by Computer Assisted Personal Interviewing (CAPI). We also introduced Computer Assisted Telephone Interviewing (CATI) and Computer Assisted Web Interviewing (CAWI). Among the reasons for doing so were cost savings and the possibility of boosting response. Note that the CATI and CAWI options were offered only at a later stage of data collection, when sample members who had previously refused to participate or had not been reached were re-contacted. In the end, only few respondents made use of these two options; 2.9 per cent of the respondents used CATI and 1.4 per cent used CAWI.

2.4 Permission to link questionnaire information to registry data

Another new feature in Wave 2 is that primary respondents were asked permission to link information gathered about them to data in the Social Statistical Database developed by Statistics Netherlands (<http://www.cbs.nl/nl-NL/menu/informatie/onderzoekers/ssb/default.htm>). 93 per cent of the respondents gave permission to do so.

3 Questionnaires

Different data collection forms were used in the NKPS main study. They are described below. To collect data from Anchors, we used an *interview* questionnaire which was administered through CAPI, CATI or CAWI, supplemented with a *self-completion* questionnaire which had a paper-and-pencil version and a web-version. The questionnaires (the original Dutch version and the translation into English) are compiled in *NKPS Working Paper No.7*². The English versions of the questionnaires include the variable names.

3.1 Interview questionnaire

3.1.1 Preloading

The interview questionnaire uses preloading, i.e. information gathered during Wave 1 is programmed in the Wave 2 version. Some of this information is used explicitly, for example when checking the respondent's name and address at the start of the interview. At other times, this information is used more or less implicitly, such as the decision to ask – or not to ask – certain questions. The questionnaire frequently refers to the month and year in which the last interview was conducted.

Family members are identified according to a particular format, such as 'Maarten, the brother born in 1953'. This rather lengthy description is used to indicate as clearly as possible who is being referred to. In follow-up questions this description is usually put in brackets. In this case, Maarten would be referred to as 'Maarten (the brother born in 1953)'. It was up to the interviewer to decide whether to use the long or the short version. In practice, the short description tended to suffice.

The answer category 'doesn't know' was used very sparingly in the questionnaire, and where it *was* used the interviewer was not allowed to prompt the respondent by reading out the category in order to minimize use of this answer category.

The interview questionnaire was programmed in Bellview by GfK PS (the bureau that carried out the fieldwork), and tested by GfK PS in four test rounds. The questionnaire was tested for:

² Pearl A. Dykstra, Matthijs Kalmijn, Trudie C.M. Knijn, Aafke E. Komter, Aart C. Liefbroer, & Clara H. Mulder (2005). Primary respondent questionnaires of the Netherlands Kinship Panel Study, a multi-actor, multi-method panel study on solidarity in family relationships, Wave 2. *NKPS Working Paper No. 7*. The Hague: Netherlands Interdisciplinary Demographic Institute.

- Correct representation and use of information gathered during the first Wave
- Routing of the questionnaire
- Use of show cards
- Hardcopy show cards versus programmed answer categories
- Answer categories consistent with hardcopy questionnaire
- Formulation of questions consistent with hardcopy questionnaire
- Possible error notification
- Unclear content
- Page layout.

3.1.1 Content

The interview questionnaire is divided into the following sections:

- A. Background
- B. Parental home
- C. Partners, parents-in-law and children
- D. Brothers and sisters
- E. Other household members
- F. Non-family relationships
- G. Details of specific relationships
- H. Alter addresses
- I. Partner and immediate family
- J. Grandchildren
- K. Family - General
- L. Home
- M. Work, education and income
- N. Ethnicity, religion and health
- P. Conclusion
- R. Evaluation questions
- X. Alter characteristics.

At the end of the interview the respondent was asked to give his/her permission to be contacted for a follow-up survey. They were also asked to give permission to link information gathered about them during the NKPS to data compiled by Statistics Netherlands (CBS). Lastly, respondents were offered a gift certificate as an incentive, or given the option of donating the

equivalent amount to charity. The interviewers had to complete a short evaluation form (Block R) immediately after each successful CAPI/CATI interview.

3.1.2 Data on family and non-family

The same set of questions was asked about almost all family members and about a maximum of five persons who were non-family. We refer to these questions as Alter characteristics, and they formed the so-called *X-module*. This module recurred throughout the interview – every time certain types of relationships had been referred to. The Alter characteristics related to:

- First name (not for current partner, or parents)
- Sex
- Year of birth
- Year of death (if applicable)
- Living arrangement (not for non-family)
- Postal code
- Frequency of contact.

A series of additional questions was asked in module G about at most twelve people. These twelve people, referred to as *CAPI Alters* were: the current partner, the biological mother, the biological father, the current partner of both mother and father, a randomly selected parent-in-law if the Anchor had a new partner in Wave 2, and the parent-in-law already selected in Wave 1, at most two children already selected in Wave 1, at most two siblings already selected in Wave 1, and a randomly selected member of the non-family network already selected in Wave 1. These questions related to:

- Marital status
- Number of children
- Level of education
- Problems suffered
- Giving and receiving support
- Quality of the relationship.

In module H, address information of the (maximum of) five family members who returned their self-completion questionnaire in Wave 1 was verified. Anchors were then asked permission to contact Alters, asking them to return a self-completion questionnaire. Respondents were also given the opportunity of first checking with the people in question. Table 3.1 provides an overview of the questions about (non-)family members.

Table 3.1. Information about family members and non-family collected in the CAPI questionnaire Wave 2

	Alter Characteristics	Solidarity	Problems suffered	Level of education	Partner status	Parental status	Country of birth
<i>Vertical-upward</i>							
Biological Father	X	X	X		X		
Biological Mother	X	X	X		X		
Current partner father	X ^a	X	X		X		
Current partner mother	X ^a	X	X		X		
Father father's side (grandfather)	X ^c						
Mother mother's side (grandmother)	X ^c						
Father mother's side (grandfather)	X ^c						
Mother mother's side (grandmother)	X ^c						
Mother-in-law Wave 1	X ^b	X	X	X	X		X
Father-in-law Wave 1	X ^b	X	X	X	X		X
New father-in-law	X ^b	X	X	X	X		X
New mother-in-law	X ^b	X	X	X	X		X
<i>Horizontal</i>							
Current partner		X	X	X	X	X	X
Partner Wave 1 (if now ex-partner)	X ^b						
Ex-partner at the time of Wave 1	X ^b						

Siblings (biological)	X						
Siblings (half)	X	X (max. 2)	X (max. 2)		X (max. 2)	X (max. 2)	
Siblings (adopted)	X						
Siblings (step)	X						
<i>Vertical-downward</i>							
Children with current partner		X (max. 2)	X (max. 2)		X (max. 2)	X (max. 2)	
Children with ex partner	X						
Children without partner	X						
Adopted children with current partner	X						
Children of current partner	X						
Children of ex-partner	X						
Grandchildren (through own children)	X ^d						
<i>Others</i>							
Other household members	X ^e						X
Non-family members (friend)	X (max. 1)	X (max. 1)	X (max. 1)		X (max. 1)		

Note: Alter characteristics are: name (if unknown), sex (if unknown), year of birth (if unknown), year of death (if applicable), living arrangement, postal code, and frequency of contact (face-to-face/otherwise/and in the case of biological parents also contact via text messaging and chatbox).

^a For this category, the postal code was not collected.

^b For this category, information on the year of death was not collected.

^c For this category, only information on the frequency of contact was collected, not on the other characteristics.

^d Information on the Alter characteristics of one grandchild was collected. The target grandchild was the oldest child of a randomly selected child about whom questions were asked in module G. If the children in module G had no offspring, the target grandchild was the oldest grandchild.

^e For this category, only information on sex and age was collected.

3.1.3 Different versions interview questionnaire

Two versions of the interview questionnaire were used during the fieldwork for the second Wave of the NKPS, namely:

- The pilot version
- The main survey version (in which the necessary changes identified during the pilot had been incorporated)

These different versions are identified in the data file by the variable BVERSION.

The interview questionnaire was adjusted in response to findings identified during the pilot. The following was changed:

- Questions about existing partner relationship in Wave 1 were added (questions BC006a, BC006b, BC006c and BC006d, see appendix 5.1)
- If the respondent was no longer in touch with an identified family member (questions BX603 and BX604), links to some of the questions in Block G were deleted, namely questions BG502 and BG601a to BG601i
- The question asking permission to link data gathered during this survey to other databases was added (question BP105)
- The possibility of giving open-ended comments was added to Block G, namely questions BG306 and BG503
- The routing and text of questions about any missing children was adjusted (questions BC080a and BC080b).

3.1.4 Different versions self-completion questionnaire

The self-completion questionnaire was also adjusted after the pilot. Questions 14b1, 14e1 and 14e2 were added and an extra response category (3) was added to question 14d1.

The extra questions 14e1 and 14e2 on job history were not added in the web version of the self-completion questionnaire.

3.1.5 Differences between CAPI, CATI and CAWI

To ensure that the questionnaires for CAPI and CATI were identical (apart from a few textual adjustments) the telephone team also conducted the interview with the aid of CAPI laptops. Apart from textual differences linked to the method of data collection, the content of the CAWI questionnaire differs slightly from that of the CAPI/CATI questionnaire, namely:

(1) Differences in the questionnaire

- Different routing for questions on income
- Block R (evaluation of questions by interviewer) is not included
- The question about permission to contact Alters requires a simple 'yes' or 'no' in the CAWI-questionnaire; the option 'respondent wants to consult Alter' is not offered.

(2) Differences resulting from procedural differences

- The CAWI questionnaire does not offer the option of the built-in postal code table (see section 3.1.6 for a description of this tool)
- The CAWI questionnaire does not offer the option of the built-in occupational classification table (see section 3.1.6 for a description of this tool)
- The paper version of the self-completion questionnaires cannot be left behind with respondents
- Interviews cannot be audiotaped
- The CAWI-questionnaire does not include built-in controls (such as the possibility of checking dates) with a view to ensuring the smooth conduct of the survey.

3.1.6 Built-in tools

The interview questionnaire includes a variety of tools to help the interviewer and to increase the accuracy of responses. During the interview, respondents were repeatedly asked to provide postal codes of family members, place of work, etc. A built-in tool, consisting of all postal codes in the Netherlands, was developed in order to keep errors to a minimum. The interview questionnaire also offered the possibility of accessing a tool that included the classification of occupations developed by Statistics Netherlands. Assigning a code to the occupations of respondents and their family members could be done on the spot, in consultation with the respondents.

3.2 Self-completion questionnaire

To reduce interview time, part of the data was collected by means of a self-completion questionnaire. Furthermore, self-completion is the most appropriate format to answer questions on attitudes and sensitive topics. The Anchor self-completion questionnaire consists of following sections:

- A. Your family
- B Your partner
- C Your other marriages (if any)
- D Your children
- E Your job
- F Leisure time
- G Opinions about family and other issues
- H Your health and well-being
- I Your places of residence

Dutch-speaking respondents had the option of filling out the self-completion questionnaire on paper or via the Internet. For this purpose, the questionnaires were programmed in Blaise by the NIDI Fieldwork center. Non-Dutch speaking respondents only had the option to fill in the self-completion questionnaires on paper. For non-Dutch speaking respondents, the questionnaire was translated into Turkish and Arabic.

4 Fieldwork

4.1 Anchor sample

The NKPS targets two population groups. The first is the general population of the Netherlands aged 18 to 79 at Wave 1 (N = 8,161)³, excluding residents of institutions, nursing homes, old people's homes and holiday homes and people without permanent residence status. This group is referred to as the 'main sample'. The second is an oversample of the four largest migrant groups in the Netherlands (Turks, Moroccans, Surinamese and Antilleans) aged 18 to 79 at Wave 1 (N = 1,403). This group is referred to as the 'migrant sample'. Different data collections were organized for the two groups in Wave 1, but in Wave 2 the fieldwork for the two groups was *combined*. The fieldwork was carried out by Growth for Knowledge Panel Services (GfK PS).

4.2 Tracking down sample members

In the period between the first and second Wave, respondents were encouraged to report a residential relocation. Change-of-address cards were included in mailings, and respondents were also informed about the option of entering new address information in a form constructed for that purpose on the NKPS-website.

In preparation of Wave 2 fieldwork all addresses were validated by Cendris, a daughter company of Dutch Mail (TPG Post) that holds a database of more than 7.3 million private households in the Netherlands. If relevant, Cendris sent the following change of address information:

- Name, former address and municipality
- Former telephone number (if available)
- Sex
- Birth date
- Date of relocation
- New address
- New telephone number (if available)

³ Wave 1 also included a so-called substitute sample, a group of 1,604 respondents who filled in an abridged, self-completion version of the interview-questionnaire (for details, see section 6.2.2 of the 1.0 version of the Wave 1 codebook). The substitute sample was not included in Wave 2.

- Cendris relocation code (which, amongst others, indicates whether all or only some of the household members had moved to the new address).

On the basis of Wave 1 information (sex, year of birth, and interview date) and the information supplied by Cendris, respondents' addresses were assigned codes ranging from A to F. The code represented the confidence that was placed in the correctness of the address information. 'A' meant that existing address information matched the information provided by Cendris exactly, whereas 'F' meant that the accuracy of address information was questionable.

During the course of fieldwork, additional efforts were made to track down the correct address via Cendris. This was done when contacted Anchors said they had never participated in the NKPS, when Anchors could not be located at a given address, or when a given address proved to be incorrect. In the event that Cendris was unable to supply new address information, personal (name, sex, birth date) and address details were sent to the last known municipality of the respondent with the request to update the information. If the municipality reported that the respondent had moved to another municipality, a request for address information was sent to that other municipality. The NIDI fieldwork center supplied 340 new addresses to GfK PS (202 main-sample and 138 migrant-sample addresses). These were addresses which were reported as incorrect by GfK PS interviewers.

4.3 Pilot

A pilot was conducted prior to the main survey in the months of May, June and July 2006. The purpose of the pilot was to test the different data collection methods and to follow all related procedures. This included the following:

- Testing the verbal and written instructions for interviewers, sending off letters of introduction, testing the Helpdesk, arranging appointments, selecting Anchors, identifying co-resident and non co-resident Alters, sending off and retrieving self-completion questionnaires, testing various data collection methods, etc
- Testing the formulation of questions in terms of clarity and unambiguity;
- Testing the logging of (non)response for Anchors and Alters for all types of questionnaires
- Monitoring fieldwork progress and generating the weekly response overviews;
- Perfecting the instructions for interviewers in the questionnaire
- Estimating the average length of the CAPI and CATI interviews, bearing in mind that the interviewers would gain more interviewing experience during the course of the project and bearing in mind the different categories of Anchors in the sample (e.g. non-migrant versus migrant, people with complex marital histories versus straightforward life courses).

For the purpose of the pilot, the NIDI fieldwork center drew a regionally clustered gross sample of 200 respondents, consisting of both respondents of Dutch descent and migrant respondents. The gross sample was varied in composition and included the regional clusters of Rotterdam and The Hague. It consisted of: 141 respondents of Dutch descent, 35 Dutch-speaking migrants, and 24 non-Dutch speaking migrants (12 Turkish-speaking, 12 Arabic-speaking).

The sample addresses for the pilot were allocated to a particular interview method (CAPI/CATI/CAWI) in advance. The purpose of this allocation was to ensure that there would be sufficient successful cases per method. Allocation of the respondents of Dutch descent was random, albeit that a telephone number had to be known for the CATI allocation. All migrant respondents were approached via CAPI. The total numbers of respondents allocated to each method were: 140 respondents via CAPI (81 respondents of Dutch descent and 59 migrant respondents), 30 respondents via CATI (only respondents of Dutch descent), 30 respondents via CAWI (only respondents of Dutch descent).

A limited number of respondents were re-contacted fairly soon after the initial contact despite the short time available for the pilot. Respondents re-contacted were those who could not be reached during the first weeks or who had been identified as 'soft' refusals. Other cases of non-response were approached again at the start of the main survey in September 2006. Respondents who were re-contacted during the pilot were first encouraged to take part via CAPI. Those who were not willing to do so were subsequently encouraged to participate via CATI. The last option was to encourage respondents to complete the CAWI questionnaire.

The pilot was 'for real' in the sense that respondents involved in the pilot were included in the total response. The data collected during the pilot have been included in the final data base as clearly identifiable cases. A total of 106 respondents (82 NKPS respondents and 24 SPVA respondents) completed the interview questionnaire during the pilot (via CAPI, CATI or CAWI); 98 of these respondents (75 NKPS respondents and 23 SPVA respondents) also completed the Anchor self-completion questionnaire during the pilot.

4.4 Interviewers

4.4.1 Selection of interviewers

A first selection of interviewers that would qualify for the second Wave of the NKPS was made in the spring of 2006 based on quality, availability, work experience and interview experience. Additional selections were made in the summer of 2006 and suitable candidates were invited to attend special training sessions. GfK PS tried, together with NIDI Fieldwork Center, to encourage as many interviewers with NKPS experience as possible to take part in the second Wave. Some interviewers attended a training or refresher course in Bellview (the language in which the interview questionnaire was programmed) prior to attending these training sessions.

The second and third phases of the fieldwork were conducted only by interviewers who had proven to be highly or sufficiently competent, based on their Wave 2 NKPS performance. The main criterion used was the response rate achieved.

To carry out the fieldwork for the migrant sample, interviewers were recruited through specialized agencies. The advantages involved the ability to use bilingual interviewers, who were familiar with the cultural values of Turkish, Moroccan, Surinamese and Antillian respondents. Initially, GfK PS cooperated with the specialized fieldwork agency Dufec. However, given the disappointing fieldwork progress, in December 2006 the expertise of another specialized agency was called in (ERC-Research).

A total of 153 interviewers were trained in face-to-face interviewing (101 face-to-face interviewers working for GfK and 52 working for the specialized agencies). During the fieldwork, three interviewers left; two chose to do so, and one was requested to leave by GfK PS. Another 17 interviewers were trained in telephone interviewing. One left on own request.

4.4.2 Training sessions

The structure and content of the training sessions were designed by GfK PS in cooperation with the NIDI Fieldwork Center. The program consisted of two half-day sessions. Four top-priorities were emphasized during the training sessions: (a) achieving a high and non-selective response, (b) obtaining survey Alter addresses, (c) receiving Anchor's permission to be contacted for participation in the third Wave, and (d) receiving Anchor's permission to link the survey data to registry data (see section 2.4). The interviewers were instructed to phone the fieldwork agency three times a week to exchange data electronically.

During the training sessions background information on the NKPS was provided. The rationale underlying the interview questionnaire was described in detail. A special session was devoted to practicing the routines in the interview questionnaire, including the built-in tools (i.e. postal code table, and occupational classification table). Training sessions were attended by NKPS-researchers. A total of 12 training sessions were organized: ten for the face-to-face interviewers and two for the telephone interviewers.

Apart from laptops, the interviewers were equipped with the following materials:

- interviewer manual (two versions: a CAPI manual and a CATI manual)
- self-completion questionnaires for the Anchors and Alters*
- hard copy version of the interview questionnaire*
- letters of introduction*
- brochure introducing the NKPS to respondents*
- covering letter accompanying the self-completion Anchor questionnaire* (with CAWI instructions)
- covering letter accompanying the self-completion Alter questionnaire* (with CAWI instructions)
- labels for self-completion questionnaires
- reply envelopes
- digital voice recorders
- expense statements
- contact forms
- show cards*
- ‘not at home’ card*
- appointment card*
- ‘not at home despite appointment’ card*
- newspaper clippings describing findings from the NKPS
- a special issue of *Demos*, a popular-science journal, devoted to first findings from the NKPS
- phone-in schedule.

* This material was translated into Turkish and Arabic for interviewers of non-Dutch speaking respondents.

4.4.3 Refresher days

In addition to the training sessions organized at the start of the fieldwork, refresher days were organized for the interviewers. During these sessions, additional instructions were given and there were opportunities to ask questions and exchange experiences. Furthermore, sound recordings of interviews (not their own) were played in order to address specific quality aspects of interviewing, such as: avoiding leading questions; sticking to the formulation of questions; keeping the interview business-like and to the point; allowing the respondent to answer the question him/herself; using show cards effectively and wherever necessary; and so forth.

4.5 Data collection Anchors

The main elements of the data collection among Anchors (= primary respondents) involved: approaching them in successive phases, including re-contacting those who had refused to take part; intensive monitoring and registration of the fieldwork progress; an incentive program for the respondents; and intensive monitoring of interviewers.

4.5.1 Letters to the respondent

Correspondence with the respondents took various forms. The first contact was through an introductory letter in which they were informed about the toll-free telephone number of the NKPS Helpdesk and the NKPS e-mail address. The letter also directed respondents to the NKPS website and to the full-color brochure enclosed for further information about the study.

The interviewer sent the introductory letter and a brochure to the respondent two days before the Anchor was contacted. Two versions of the introductory letter were drawn up (see Appendices 1 and 2):

- Introductory letter main sample
- Introductory letter migrant sample (also available in Turkish and Arabic)
- Re-contacting letter main sample
- Re- contacting letter migrant sample (also available in Turkish and Arabic)
- In addition, the following letters were sent to the Anchors (where appropriate)
- Reminder self-completion questionnaire (also available in Turkish and Arabic)
- CAWI letter of invitation
- CAWI reminder

- CAWI second reminder
- CAWI send off self-completion questionnaires
- CATI send off self-completion questionnaires
- Send off gift certificate (also available in Turkish and Arabic).

The personalized letters were sent to the Anchor. They were printed on NKPS writing paper, signed by Professor Pearl Dykstra, and sent in an NKPS envelope.

4.5.2 Contact phases

Potential respondents were contacted in three phases. All respondents were asked to participate in a face-to-face interview (CAPI) during the first phase of the second Wave. An introductory letter (Appendix 1) was sent to the Anchors by the interviewer concerned to announce the second Wave of the fieldwork. Main-sample and migrant-sample respondents were sent different letters. The interviewer contacted the respondents by telephone within two days of receipt of this letter (if their phone number was known). There were at least 10 initial contacts by telephone or three home visits if no telephone number was known. Contact was sought at different times of the day and on different days of the week (on weekdays and during the weekend). As hardly any telephone numbers were known for the migrant respondents, all initial contacts involved home visits.

In the second phase, the re-contacting phase, people who had refused and respondents who had not been reached were approached again. A distinction was made between ‘hard’ and ‘soft’ refusals. GfK PS has developed ways of determining the type of refusal. Two characteristics play a role in determining whether a refusal is soft or hard: the interviewer’s assessment, combined with the reason for the refusal. ‘Soft’ refusals were approached by a different interviewer in the re-contacting phase—after a slightly different introductory letter had been sent—requesting them once again to take part in the NKPS. ‘Hard’ refusals were phoned by specially trained CATI interviewers.

Alternative survey methods were available during the third phase: Computer Assisted Telephone Interviewing (CATI) and Computer Assisted Web Interviewing (CAWI). In practice, this meant initially trying to conduct a CAPI-interview, and if that was not successful, first offering CATI and then CAWI as an alternative during the re-contacting.

For the interviewers, fieldwork involved the following steps:

- Fixing a date for an interview
- The interview
- After the interview, the interviewer left the self-completion questionnaire behind with the Anchor (including instructions on how to complete the web-based questionnaire)

- If a successful self-completion questionnaire had not been returned by the Anchor after one or two reminders (depending on whether or not they had a telephone number), the interviewer visited the Anchor again to collect the self-completion questionnaire
- In the event the Anchor wished to consult Alters first about granting permission to approach them, the interviewer contacted the Anchor within four weeks of the CAPI/CATI interview to find out whether permission had been granted to approach the Alters.

If no-one was at home when a face-to-face interviewer came to the house, the interviewer left behind a card stating that he/she had passed by. If the face-to-face interviewer came to the house and arranged to come back another time, he/she left behind an 'appointment card' stating the details of the appointment. If an appointment was made by telephone, the interviewer asked the Anchor to immediately write down the appointment in his/her diary. If the Anchor was not at home at the time of the appointment, a card was left behind stating 'not at home despite appointment'.

Respondents who had indicated that they were not willing to take part in CAPI, but that they would be willing to do so via CATI, were contacted by the call center for the completion of the questionnaire. Here, too, contact was sought at different times of the day and on different days of the week. Respondents who had indicated that they did not wish to cooperate via CAPI or CATI but that they would cooperate via CAWI were sent a letter stating the website address and their personal access code. Respondents who subsequently failed to complete the questionnaire were sent a letter of reminder.

Interviewers employed by Dufec conducted the interviews with migrant sample members. Given that progress was slow, Dufec interviewers were replaced by ERC-research interviewers in January 2007. From then on, ERC-research interviewers contacted and re-contacted all Turkish and Moroccan respondents who had not responded, and GfK PS did the same for the Antillean and Surinamese respondents, who could be interviewed in Dutch.

4.5.3 Registration of contacts

The interviewers were given contact forms on which they could log the result of their visits to each address. They were able to log the results of ten initial contacts. The NKPS offered interviewers the following response options:

1. Appointment for interview arranged
2. Conduct an interview/resume interrupted interview
3. Anchor not present despite appointment
4. No answer/ voicemail/ answering machine
5. Anchor not at home, contact with other person

6. No-one at home
7. Anchor says he/she has never taken part in the NKPS
8. Anchor cannot be traced
9. Refusal through Helpdesk
10. Refusal by Anchor
11. Refusal by someone else
12. Anchor temporarily not contactable
13. Incorrect telephone number
14. Incorrect address/ moved house etc
15. Anchor seriously ill/ has Alzheimer's
16. Anchor died
17. Other, namely ...

Follow-up screen to option 9, 10 or 11:

- Can't be bothered/ not interested
- No time/ too time-consuming
- Tired of surveys/ bad experience
- Lack of confidence in survey
- Doesn't see the point of taking part
- Waste of money
- Work/ study commitments
- Too personal/ discomfort in discussing the topic
- Personal circumstances
- Giving informal care
- Respondent would be willing to participate through CATI (only in re-contact phase)
- Respondent would be willing to participate through CAWI (only in re-contact phase)
- Other, namely

Follow-up screen to 12:

- Vacation
- Giving informal care
- Temporarily abroad
- Ill (temporarily not available)
- Personal circumstances
- Other, namely....

Follow-up screen to 14:

- Address doesn't exist
- Person does not/no longer lives at this address: moved within the Netherlands
- Person does not/no longer lives at this address: moved abroad
- Person does not/no longer lives at this address: destination unknown
- No-one living at this address
- Commercial property
- Other, namely....

This information was entered into the CAPI laptop upon the interviewers' return. The contact forms served as a tool for the interviewers; they did not have to get out and start up their computers at each address. The following information was logged for each initial contact:

- Date: day of the week and time of day;
- Method of contact (personal or by telephone);
- Result of the initial contact.

Other information could be added on the reverse side of the form:

- In the event of an appointment: date and time of appointment;
- In the event of refusal: reason for refusal;
- In the event of refusal in the first phase: the interviewer's assessment of whether the respondent should be approached again;
- In the event of refusal in the second phase: whether the respondent was willing to take part in CATI or CAWI;
- If the Anchor was temporarily impossible to reach: reason why this is so;
- In the event of incorrect address: reason why address is incorrect;

- New address/telephone number (if traced);
- The incentive value (in second or third phase);
- Whether the Anchor would like to ask any other Alters permission for them to be contacted.

The contact forms used in the first phase were also used in the second phase, and the forms used in the first and second phases were also used in the third phase. In this way the interviewers were well-informed about the respondent's contact history, allowing them to respond effectively.

4.5.4 Procedures self-completion questionnaire

The self-completion Anchor questionnaire was left behind by the interviewer during the interview, together with a reply envelope. The completed questionnaires were sent to GfK PS (postage paid) by the Anchors. Respondents were notified of the option of filling in the self-completion questionnaire via the web. The interviewer stuck a label on the self-completion questionnaire which displayed the Internet code needed to complete the self-completion questionnaire via CAWI as well as the respondent's number. If the interview questionnaire had been completed via CATI or CAWI, the self-completion questionnaire was sent to the Anchor by mail.

The interviewer had to see to it that the self-completion questionnaires were filled in and returned. If the completed questionnaire had not been returned within 10 days, a reminder was sent off. If the completed questionnaire had still not been received within 10 days of sending off this reminder, the respondent was phoned by a telephone interviewer (if their phone number was known). If still no response was forthcoming, the interviewer who had conducted the CAPI-interview was asked to visit the respondent at home, requesting them once again to complete the questionnaire and return it to GfK PS. Migrant respondents did not receive a telephone reminder. If the completed questionnaire had not been returned within 10 days, a reminder was sent off and if the completed questionnaire had still not been received within 10 days of sending off this reminder, the interviewer who had conducted the CAPI-interview was asked to visit the respondent at home.

In a small number of cases (≈ 10) two self-completion questionnaires from the same Anchor were received. The questionnaire that was received first was selected for data-entry because its information was closest to the date of the interview. Whenever possible, missing values (if any) in the first-received questionnaire were substituted by the answers from the later-received questionnaire

4.5.5 Incentive program

Anchors who had completed both the main questionnaire and the self-completion questionnaire were given an incentive. Alters did not receive an incentive for their participation. Anchors who agreed to participate after the first contact phase were given 10 euros as a token of appreciation for their

participation. Respondents were presented with the option of receiving a gift certificate or of having the money donated to a worthy cause. The average value of the incentives given to all respondents in the re-contacting phase was 20 euros. Interviewers were given the freedom to offer some respondents more than others during the re-contacting phase.

Several extra measures were taken (especially at the end of the fieldwork) given that the number of self-completion questionnaires was lower than expected:

- The face-to-face interviewers received an additional incentive for each self-completion questionnaire completed and returned by the Anchor.
- In mid-February 2007 a letter of reminder was sent to 286 Anchors who had not yet sent back the self-completion questionnaire. The letter included an additional incentive worth 10 euros, the self-completion questionnaire and a return envelope. In the letter the respondent was thanked for his/her cooperation so far and asked to complete the self-completion questionnaire.
- GfK PS's telephone team also phoned the Anchors, asking them whether the respondent still had a self-completion questionnaire and whether they were still prepared to complete it. If the Anchor no longer had a self-completion questionnaire, another copy was sent to their address. These Anchors were subsequently phoned by a face-to-face interviewer to arrange a date for them to come and collect the self-completion questionnaire. Some respondents did not want an interviewer to come to their home and said they would complete the self-completion questionnaire via the Internet or send it back themselves. Respondents who had not completed (via the Internet or on paper) their self-completion questionnaire two weeks later were called back.
- Anchors who had started to complete the self-completion questionnaire via the Internet, but who had not completed the entire questionnaire, were phoned again, requesting them to do so.
- For a small number of respondents the self-completion questionnaire was conducted by phone.
- In April 2007 two travel vouchers worth 250 euros each were put up for raffle among the face-to-face interviewers because the target had been reached.
- As the number of self-completion questionnaires from migrant respondents was especially low, extra measures were taken to boost their successful completion.
- The interviewers were given extra arguments to convince the migrant-respondents to participate in the second Wave of the NKPS and to fill in the self-completion questionnaires; the arguments emphasized the uniqueness of having data on changes in migrants' lives.

- In some cases, after the CAPI-interview, interviewers waited for the respondent to complete the self-completion questionnaire. In others, the interviewer made an appointment with the respondent to visit again in order to collect the self-completion questionnaire.
- In the case of difficulties with the Dutch language, which inhibited the respondent to fill in the self-completion questionnaire, the interviewer helped the respondent with filling in the self-completion questionnaire.
- The interviewers received extra incentives for these abovementioned efforts.

4.5.6 Helpdesk

During the fieldwork for the second Wave, GfK PS provided a helpdesk which could be reached by Telephone (toll-free, 0800) during office hours. A helpdesk program had been developed to process callers' reactions. The program consisted of a spreadsheet which included frequently asked questions, arguments to convince potential respondents to take part (if they had previously refused) and the possibility of recording callers' reactions. In the event of refusals, the Helpdesk recorded the reason and made an assessment of how adamant the refusal was. A total of 539 respondents were processed by Phone. 103 respondents contacted the Helpdesk by email.

Thus, in total, 642 respondents have contacted the helpdesk. Most contacted the helpdesk to change or cancel an appointment. Some also called to indicate that they did not want to participate in the second Wave of the NKPS. Others called with questions concerning how to fill in the CAWI questionnaire. Finally, respondents called to ask when and how they would receive their incentives.

4.6 Quality control

Interviewers were monitored during the fieldwork to ensure that the way in which they conducted their interviews met required standards. Contact with each face-to-face interviewer took place on a weekly or bi-weekly bases, with particular attention to the following: speed (they needed to conduct sufficient interviews per week); response rate and quality of initial contact; and quality of interviewing.

Interviewers were monitored on the basis of a log of initial contacts and successful interviews—i.e. the response rates—and the sound recordings of interviews conducted. Each interviewer audiotaped the first two interviews, after which one in every 20 interviews was audiotaped. The computer prompted whether an interview had to be audiotaped. Respondents were always asked for permission. If a respondent did not give his/her permission, the interviewer indicated this on the interview questionnaire, in which case the interview was conducted without being recorded. If the

interviewer did not have the voice recorder with him/her because its memory was full and it had been sent off, he/she was able to click the option ‘voice recorder not available’ in the appropriate space on the questionnaire. The interviews were audiotaped in order to capture any problems in the way in which the interview was being conducted. The interviews were listened in to at random. Listening to the sound recordings showed up any remaining problems in administering the questionnaire. Such problems were discussed with the interviewers. During the CATI fieldwork, the supervisors monitored the interviewers by listening in to the interviews at random.

On the basis of listening to the audiotapes, 12 interviewers received a mediocre evaluation. GfK PS called these interviewers to account. Two other interviewers were called to account by GfK PS, because of complaints GfK PS had received about them.

Another way of monitoring the interview fieldwork was by sending a control questionnaire to 1000 Anchors with whom interviews had been conducted and 500 sample members who had refused participation. Out of a total of 1500 control questionnaires that were sent off, 606 (82 refusals and 524 successful Anchors) were sent back. The controls did not reveal any cases of fraud. The interview had in fact been conducted in all cases and the respondent had been correctly approached.

The NIDI fieldwork center also had access to Reflex—an information processing package developed by GfK PS—via a Virtual Private Network server, which provided an up-to-date status of individual respondents at any given moment. In this way, progress could be monitored at a distance by the NIDI fieldwork center.

5 Outcomes fieldwork

5.1 Progress

The fieldwork for the second Wave of the NKPS took place between September 2006 and June 2007. The fieldwork resulted in 6670 interviews with usable data, which includes the interviews from the pilot. In total, 6026 main-sample and 644 migrant-sample interviews were conducted. These numbers are provisional, given that a final sweeping is taking place in the fall of 2007 to reach primary respondents who have not yet been contacted.

Figure 5.1: Number of interviews starting September 2006, finishing June 2007 (including pilot)

Figure 5.1 shows the progress of the fieldwork over time⁴. A distinction is made between the total number of interviews, the number of main sample interviews and the number of migrant-sample interviews.

Figure 5.2: Number of self-completion questionnaires received starting September 2006, finishing June 2007 (including pilot)

⁴ Phoning in was not possible during the weekend when GfK PS moved offices (30 September/1 October 2006) and during the weekend of 30/31 December 2006.

Figure 5.2 shows the number of received self-completion questionnaires received from Anchors with whom a successful interview was held. A distinction is made between the total number of received questionnaires, the number of questionnaires received from main Anchors, and questionnaires received from migrant Anchors.

5.1.1 CAPI, CATI, CAWI

The NKPS-team had initially estimated that 85% of the main respondents would complete the main questionnaire via CAPI, 10% via CATI and 5% via CAWI. Furthermore, CAWI and CATI would not be offered to migrant respondents. Realized percentages are given in Table 1.

Table 5.1: Completed interviews, by method of data collection

	Main sample		Migrant sample		Total	
	N	%	N	%	N	%
CAPI	5,731	95.10	637	98.9	6,368	95.5
CATI	199	3.3	5	0.9	204	3.1
CAWI	96	1.6	1	0.2	98	1.4
Total	6,026		573		6,326	

The percentage of main respondents (Anchors) who took part via CAPI was higher than initially expected, and the percentage that participated via CATI and CAWI was lower than the original estimate. As described in section 4.5.2, CATI and CAWI were offered only in the third contact phase. In the end, relatively few respondents were eligible for CATI and CAWI given that the first and second phases had progressed beyond expectations. When the fieldwork was approximately halfway, CAWI and CATI were also offered to Dutch-speaking migrant respondents to help boost response. Five migrant respondents participated via CATI and one migrant respondent did so via CAWI.

5.1.2 Average durations

Interviews lasted an average of 60.9 minutes: an average of 60.2 minutes for main-sample respondents (range 20-210 minutes) and 67.0 minutes for migrant-sample respondents (range 21-180 minutes). The longer interview duration in the migrant sample is partly attributable to the lower proportion of people living alone (who skip the questionnaire modules on current partnership, children living at home, and so forth). The longer duration is also attributable to the extra questions that were asked because of missing Wave 1 information, which in turn is the outcome of having had separate data collection procedures in Wave 1 (see section 2.1. for details).

Among respondents who took part via CAPI, the interview lasted an average of 61.0 minutes, via CATI 62.2 minutes and via CAWI an average of 46.4 minutes. The length of the interview varied depending on the size of the Anchor's family and the complexity of their family relationships, which in turn is associated with divorce and remarriage among parents and/or among the respondents themselves. The length of the interview also depended on the changes that had taken place in family relationships. If children had been born or relationships had been broken off, more time was needed to conduct the interview than among respondents whose relationships and personal circumstances had remained the same.

Completing the Anchor self-completion questionnaires took an average of 20 to 40 minutes. Completion of the Alter self-completion questionnaires also lasted an average of 20 to 40 minutes per questionnaire.

5.1.3 Evaluation

The interviewer evaluated the course of each interview after it had been completed. Questions were answered concerning the setting of the interview, such as the presence of others and the general atmosphere. The Anchor's performance was also rated, using the evaluation form of the interview questionnaire.

The majority of the interviews were a bilateral encounter of the interviewer and Anchor. In 27 percent of the cases, another person was present during the whole or part of the interview, usually the Anchor's partner, and less often a child still living at home. Only one percent of the interviews were rated as 'unpleasant' or 'very unpleasant'.

A number of Anchors had difficulties understanding the questionnaire. Difficulties were reported as 'major' in 20 cases (see section 6.4.3). These respondents required much assistance throughout the interview and had trouble with pre-structured answer categories.

In 643 cases interviewers documented special circumstances related to the interview situation or to the lives of Anchors that might have influenced the answers that were given. Examples of these circumstances are the presence of loud children during the interview, seriously ill respondents, recently deceased family members, and problematic family histories. Please refer to variable BR113 in the dataset to identify respondents in these categories. The coding of these special circumstances will be ready with version 1 of the Wave 2 codebook.

Anchors' responses to special requests might also be viewed as a form of evaluation. One special request involved whether respondents would be willing to participate in a third Wave. Three percent of respondents stated that they did not want to be re-contacted. A second special request involved asking permission gathered about them to data compiled by Statistics Netherlands: 93% of

the Anchors granted permission to do so. A third special request involved permission to approach selected family members, so-called Survey Alters. In Table 2, the percentage of Anchors who granted permission is listed, specified by type of Survey Alter. The table shows that permission varied by type of relationship. Anchors most often granted permission to contact partners, and least often granted permission to contact parents.

Table 5.2. Percentage of Anchors granting permission to approach Survey Alters

Type of Survey Alter	Permission to approach?	
	Yes (%)	No (%)
Partner	84	16
First child	74	26
Second child	73	27
Parent	57	43
Brother/sister	62	38

5.2 Response rates Anchors

5.2.1 Response rates interview questionnaire

Table 5.3 provides information on the response rates for Anchors, separately for the main and migrant samples. Both overall rates and cooperation rates are shown. Overall response rates depend on whether or not a respondent could be reached. Cooperation rates take into account only those respondents who were actually contacted. The categories “too ill” and “other” (e.g. deceased, moved abroad) are counted as non-response. The Wave 2 overall response rate for the main sample is 74%, whereas it is 46% for the migrant sample. This response rate is calculated as the percentage of Wave 1 respondents who completed the Wave 2 interview. Note that these response rates are provisional, given that a final sweeping is taking place in the fall of 2007 to reach primary respondents who have not yet been contacted.

Refusal rates of contacted respondents in the migrant sample (35.9%) were higher than in the main (16.5%) sample. Main and migrant contact rates differ dramatically: a large proportion of migrant respondents could not be reached (24.9%). Note that the migrants sampled for the NKPS are generally from urbanized areas where migrants form a large proportion of the population. Response

rates tend to be lower in urbanized areas, and this might partially account for the difference in response rate between the main and migrant sample.

Table 5.3: Overall response rates and cooperation rates for both main and migrant-sample Anchors

	Main sample			Migrant sample		
	Counts	Overall %	Cooperation %	Counts	Overall %	Cooperation %
Interview	6,026	73.8	83.5	644	46.0	63.7
Refusal	1,195	14.6	16.5	367	26.2	36.3
Not reached	681	8.3		349	24.9	
Too ill	161	2.0		22	1.6	
Other ^a	98	1.2		19	1.4	
Total	8,161	100.0	100	1,401	100.0	100

^aThe category 'other' includes deceased respondents and respondents who left the Netherlands.

During the face-to-face interview, 5% of the 8,161 main sample respondents indicated that they did not want to participate in a future wave of the NKPS. Among the 1,403 migrant respondents, 14% indicated that they did not want to participate in a future wave of the NKPS.

5.2.2 Differences in response rates main sample

Table 5.4 shows the results from binary logistic regression analyses predicting various reasons for non-response among main-sample respondents. The results show to what extent respondents with certain characteristics are more or less likely to show non-response than others. Weights will be constructed for such characteristics, to ensure that the Wave 2 sample is comparable to the Wave 1 sample. These weights will be reported in the 1 version of the Wave 2 codebook. In what follows, only the reasons for overall non-response are discussed.

Women are less likely to be non-respondents than men, although the difference between the sexes is rather small. Church members are less likely, whereas respondents living in urbanized areas are more likely to be non-respondents. Those aged 18-30 have a higher likelihood for non-response compared to those aged 31-45. Singles are more likely to show non-response compared to the cohabiting. The married do not differ from the cohabiting. Those with lower levels of educational attainment are more likely to be non-respondents than are the highly educated. Finally, the way in

which the Wave 1 interview was experienced predicts non-response. The more pleasant the interviewer evaluated the interview, the less likely non-response is. Similarly, if respondents felt that interview was too long, they were more likely to be non-respondents in Wave 2.

Table 5.4: Odds ratios from binary logistic regression predicting reasons of non-response among main-sample respondents (reference category is successful interview)

	Predicting:			
	Refusal Odds Ratio	Relocation Odds Ratio	Death Odds Ratio	All reasons Odds Ratio

Interviewer: pleasant / very pleasant interview	0.61***	0.73**	0.91	0.71***

^a: ref = Age 31-45 ^b: ref = cohabiting; ^c: ref = Intermediate vocational;

^d: ref = employed; * = p < 0.05; ** = p < 0.01; *** = p < 0.01

5.2.3 Differences in response rates migrant sample

Table 5.5 shows the results of the non-response analysis for migrant respondents. The reason for conducting a separate analysis is that not all questions in the Wave 1 main-sample questionnaire are also in the Wave 1 migrant-sample questionnaire. Moreover, the number of migrant respondents in certain categories is considerably lower than that of main-sample respondents. In the migrant-sample analysis, a number of variables predicting death were omitted due to small numbers (only 16 migrant respondents deceased between the two Waves). The only significant indicator for non-response is gender. Migrant women are less likely to be non-respondents than migrant men, although the difference is rather small.

Table 5.5: Odds ratios from binary logistic regression predicting reasons of non-response among migrant-sample respondents (reference category is successful interview).

Predicting	Refusal	Relocation	Death	All reasons
	Odd Ratio	Odd Ratio	Odd Ratio	Odds Ratio
Sex (female=1)	0.82	0.78	0.35	0.77*
Church member	1.14	0.88	0.78	1.05

^d: ref = unemployed; *= $p < 0.05$; **= $p < 0.01$; ***= $p < 0.01$

5.2.4 Response rates self-completion questionnaire

At the end of the interview, respondents received a self-completion questionnaire that was to be picked up by the interviewer and returned to GfK PS.⁵ Among main-sample respondents, 95% of the self-completion questionnaires were returned and processed, a two percent point increase from Wave 1. Among migrant-sample Anchors the percentage was somewhat smaller, namely 85%. The lower return rate of the self-completion questionnaires for migrant-sample respondents is partly due to a technical problem. The data from the migrant-sample Anchors who had filled out the self-completion questionnaire via Internet were lost due to unforeseen complications with the computer program Blaise.

To check for selectivity, we calculated the return rate of processed questionnaires by a number of family characteristics, and more particularly the perception by the Anchor of the quality of the relationship with selected Alters (his/her partner, mother, sibling and child). As Tables 5.6 and 5.7 show, the response rate did not vary by perceived quality of the relationship with selected Alters, suggesting that selectivity is not a major issue.

Table 5.6: Percentage of main-sample respondents returning the self-completion questionnaire by perceived quality of the relationship with selected Alters

	Current partner	Mother	Sibling	Child
Quality of relationship	%	%	%	%
Not great	97	93	94	95
Reasonable	97	96	95	94
Good	95	95	96	96
Very good	95	95	95	96

⁵ Note that respondents also had the option to fill in the questionnaire on the web. For simplicity sake, we use paper-and-pencil terminology.

Table 5.7: Percentage of migrant-sample respondents returning the self-completion questionnaire by perceived quality of the relationship with selected Survey Alters

	Current partner	Mother	Sibling	Child
Quality of relationship	%	%	%	%
Not great		82	85	
Reasonable	89	83	83	
Good	83	85	84	87
Very good	86	85	88	84

Note: cells with less than 15 cases deleted

We also checked for consistency between the interview questionnaire and the self-completion questionnaire in reports of background characteristics: namely sex and year of birth. The consistency in reports was high. Regarding the main sample, in 0.8 percent of the cases respondent's sex as reported in the self-completion questionnaire differed from that reported in the CAPI interview. In 0.2 percent of the cases there was a difference of five years in reported age. In 0.8 percent of the cases there was an inconsistency in the reports of both sex and age. Regarding the migrant sample, in 0.4 percent of the cases respondent's sex as reported in the self-completion questionnaire differed from that reported in the CAPI interview. In 2.1 percent of the cases there was a difference of five years in reported age. In 0.4 percent of the cases there was an inconsistency in the reports of both sex and age.

5.2.5 Wave 2 response rates in the NKPS compared to other studies

It is useful to compare the response rates of our second wave to those of other panel studies. The second Wave of the National Survey of Family and Households in the US (conducted in 1992-93) had an overall response rate of 76.9 per cent (calculated from Voydanoff & Ddonelly, 1999⁶; White, 2001⁷). This rate includes also people who died in between the Waves. When they are excluded from the denominator, the overall response rate is 82 per cent. The second Wave of the British Household Panel Study (conducted in 1991-92) had a response rate of 87.4 per cent⁸. The second Wave of the

⁷ White, L. (2001) Sibling Relationships Over the Life Course: A Panel Analysis. *Journal of Marriage and Family*, 63(2), 555-568.

⁸ Sturgis, P. & Allum, N. (2004). *Panel conditioning and scale reliability. Evidence from the British Household Panel Survey*. Conference paper (available online: <http://epubs.surrey.ac.uk/publsoc/5>)

Panel Survey of Income Dynamics (conducted in 1968-69) had a response rate of 88.5 per cent⁹. The second Wave of the Belgian Household Panel (conducted in 1992-93) had a response rate of 86 per cent¹⁰.

The response rates of second Wave panels in the Netherlands are only slightly lower than in other Western countries. The second Wave of the National Voters Study [*Nationaal Kiezersonderzoek*, conducted in 1970-71] had a response rate of 79 per cent¹¹. The second Wave of the Panel Study of Social Integration in the Netherlands (conducted in 1989) had a response rate of 79.9 per cent¹². The response rate of the second Wave of the Longitudinal Aging Study (conducted in 1995) Amsterdam was 81.9 per cent (calculated from Deeg, 2005¹³).

The Wave 2 response rate in the NKPS (73.8%) is lower than that of the longitudinal studies reported here, the majority of which were carried out in the early 1990s. Declining interest over time to participate in surveys (De Leeuw & De Heer, 2002¹⁴) might account for the difference.

5.3 Representativity sample

5.3.1 Distribution by background characteristics

To what extent is the realized sample of Anchors representative of the population at large? Using population data from Statistics Netherlands for 2006, we compared the realized Wave 2 main sample to the non-institutionalized population in the 21-89 age range with respect to the following characteristics: sex, age, household composition, level of urbanization, and region of the country. In the analysis reported below, Wave 2 sample data are corrected for sample design effects (i.e. the fact that the NKPS is based on an address sample rather than a person sample, see section 7.2.1 of version 1 of the Wave 1 codebook). Tables 5.8 through 5.12 show the distribution of characteristics for (a) the

main sample, and (b) the population. Migrant respondents are excluded from these distributions as they are over-sampled and would thus skew the results.

5.3.2 Distribution by sex

The distribution by sex (Table 5.8) in the main sample clearly differs from that in the comparison population, as was so in Wave 1. Men are under-represented by about 7 percentage points, as was so in Wave 1.

Table 5.8. Distribution by sex for the population and the realized sample

	Sample	Population	Sample / population
Sex	%	%	
Men	41.7	49.1	0.8
Women	58.3	50.9	1.1

Note: the age range in both the population and the realized sample is 21-89

The migrant sample is excluded.

5.3.3 Distribution by age

Table 5.9 shows the age distribution of the realized samples and the comparison population for men and women. The table shows an over-representation of people in the middle age ranges, although this differs somewhat between men and women. The observed under-representation of age ranges 20-30 in Wave 1 has increased in Wave 2. This is because years have passed since the first Wave, and no new participants have been recruited. The young respondents in Wave 1 have simply grown older. For men, age ranges 45-75 are over-represented, for women ranges 40-60 are over-represented. Finally, the age ranges 65-89 for women, and 80-89 for men are under-represented.

Table 5.9. Distribution by age for men and women in the population and the realized sample

Age	Men			Women		
	Main Sample %	Population %	Main Sample / population	Main Sample %	Population %	Main Sample / population
21-24	2.7	6.5	0.4	3.1	6.2	0.5
25-29	3.7	8.3	0.4	5.0	8.0	0.6
30-34	7.3	9.0	0.8	9.6	8.6	1.1
35-39	9.8	11.0	0.9	12.5	10.4	1.2
40-44	11.6	11.2	1.0	13.1	10.5	1.3
45-49	12.7	10.5	1.2	12.6	9.9	1.3
50-54	14.2	9.6	1.5	11.2	9.1	1.2
55-59	10.5	9.4	1.1	10.7	8.9	1.2
60-64	9.7	7.8	1.2	7.9	7.5	1.0
65-69	7.4	5.8	1.3	5.3	5.9	0.9
70-74	5.6	4.6	1.2	4.5	5.1	0.9
75-79	3.2	3.4	1.0	3.2	4.4	0.7
80-89	1.4	3.0	0.5	1.5	5.6	0.3

Note: the age range in both the population and the realized sample is 21-89. The migrant sample is excluded.

5.3.4 Distribution by household status

Focusing on the distribution by household status, we see differences and commonalities between the main sample and the comparison population (Table 5.10). Men and women living alone are overrepresented, although not as strongly as in Wave 1. For both men and women, the proportions of respondents living at home with their parents are strongly under-represented. The same holds for single parents, both men and women in this category are under-represented. Men and women living alone are also under-represented, as are cohabiting men without children and women in the “other” category (e.g. sibling households, three-generation households). The married, and those living with children are well-represented in the sample. Participation in the NKPS seems to have appealed most to those in ‘traditional’ family arrangements.

Table 5.10: Distribution by household position for men and women in the population and the realized Wave 2 sample

Household position	Men			Women		
	Sample	Population	Sample / population	Sample	Population	Sample / population
	%	%		%	%	
Child living at home	3.2	7.4	0.4	2.1	3.4	0.6
Living alone	12.1	18.8	0.6	15.6	20.9	0.7
Cohabiting no child	8.0	8.5	0.9	8.3	7.7	1.1
Married no child	32.4	26.8	1.2	26.4	25.8	1.0
Cohabiting with child	4.7	4.5	1.0	5.0	4.4	1.1
Married with child	37.2	30.9	1.2	39.9	29.9	1.3
Single parent	0.5	1.3	0.4	1.5	6.2	0.2
Other	1.9	1.9	1.0	1.2	1.7	0.7

Note: the age range in both the population and the realized sample is 21-89 (non-institutionalized persons). Migrant sample is excluded.

We examined whether the over-representation and under-representation of certain household positions in the sample were an artifact of the age distribution. As Table 5.11 shows, almost all categories are under-represented in age ranges 21-34, whereas most categories are over-represented in the 35-64 ranges. The clearest differences can be observed for respondents living alone: age ranges 21-34 are quite strongly under-represented whereas age ranges 35-74 are over-represented. The cohabiting living without children are over-represented in age ranges 35-64. When considering the representation of respondents across household positions, it is important to take the age distribution of the sample into account.

Table 5.11: Ratio of sample to population by household position and age categories (men and women)

	Age category (at Wave 1)						
	21-24	25-34	35-44	45-54	55-64	65-74	75-89
Household position							
Child living at home	1.2	0.7					
Living alone	0.2	0.5	1.2	1.5	1.4	1.4	0.8
Cohabiting, no child	0.5	0.8	1.3	1.6	1.4		
Married, no child		0.8	1.0	1.1	1.1	1.0	0.7
Cohabiting, with child		0.9	1.0				
Married, with child		0.8	1.0	1.1	1.0	0.9	
Single parent			0.7	1.0			
Other	1.2	1.2	1.2	1.3	0.8		

Note: the age range in both the population and the realized sample is 21-89 (non-institutionalized persons). The migrant sample is excluded. Cells with fewer than 25 have been deleted.

5.3.5 Distribution by region

The regional distribution of the realized sample is reasonable, representing the population figures quite accurately. Respondents in the South and East are over-represented whereas respondents from the West are under-represented. The proportions are similar to those reported in Wave 1.

Table 5.12: Distribution by region for the population and the realized sample

	Main Sample	Population	Main sample / population
Region	%	%	%
North	10.8	10.4	1.0
East	23.9	20.8	1.1
West	41.8	46.8	0.9
South	23.6	22.0	1.1

Note: the age range in both the population and the realized sample is 21-89 (non-institutionalized persons). The migrant sample is excluded.

6 Documentation data file

In this chapter, information is provided on the construction of variable names, newly constructed variables in Wave 2, and the procedure of matching Alter information across modules and questionnaires. Information on fieldwork variables, Alter status variables, special circumstances of the Anchor, and the coding of alphanumeric information will be reported in version 1 of the Wave 2 codebook. For a list of new variables in Wave 2, see Appendix 5.

6.1 Variable names

6.1.1 Method of construction

For the second Wave, the same name giving scheme as in Wave 1 was used. However, due to changes in the questionnaires between Wave 1 and Wave 2, some changes needed to be made with respect to the assignment of the question number in the questionnaires.

We decided that:

- If a question in Wave 2 is identical or almost identical to a question in Wave 1, the variable name of the question in Wave 2 is assigned the same question number as in Wave 1. Whether a question is identical or nearly identical can be made up from the labeling of the variable: If the question is identical, the label ends with '*(variable name Wave 1)*', for example '(AB201)'. If the question is nearly identical, the label ends with '*(cf. variable name Wave 1)*', for example '(cf. AX201E)'.
- If one of the original questions from Wave 1 was deleted in Wave 2, the question number was dropped in Wave 2. For example, if question number 18 from Wave 1 was dropped, the variable names in Wave 2 are in the following order: *BS17SUF*, *BS19*.
- If new questions were added in between two original questions from Wave 1:
 - In the main questionnaire, new questions were placed at the front or at the end of the specific block in the questionnaire, in order to stay as close as possible to the ordering of questions in Wave 1. For example, questions in the C block on new partners or changes in the relationship with old partners were placed in front of the original questions (with question numbering starting with zero instead of one).
 - In the self completion questionnaire, new questions were assigned the same number as the question before them, complemented with a letter and number at the end, starting with *A1*. If the next question was an independent new question, the letter was changed into the next

one in the alphabet, thus *B1*. If the next question was a new sub-question, the letter was unchanged, but the number was increased by one, thus *A2*. For example; in between questions 6 and 7 of the self-completion questionnaire of the Anchor, a number of questions and sub-questions were added. These were labeled *BS6A1*, *BS6B1*, *BS6C1*, *BS6C2*, *BS6C3*, (...), *BS7*.

6.1.2 Construction of new Alters

The second Wave resulted in a number of ‘new’ Alters. The category of new Alters comprises: ex-partners, new partners, ex-parents-in-law, new parents-in-law, new children, new partners of parents. To identify these new Alters in the X-module, the following letter combinations were assigned (for additional information see sections 6.3.1 through 6.3.6).

- P1 Information provided about the Wave 1 partner of Anchor¹⁵ (in the Wave 1 dataset, this Alter was indicated by the letters CP, standing for current partner)
- FL1 Information provided about the father of the partner of Anchor at Wave 1¹⁶
- ML1 Information provided about the mother of the partner of Anchor at Wave 1¹⁷
- P2 Information provided about the new partner of Anchor, in case the Anchor has a new partner since Wave 1
- FL2 Information provided about the father of the new partner of Anchor
- ML2 Information provided about the mother of the new partner of Anchor
- E Information provided about the most recent ex-partner at Wave 1
- N1 - 6 Information provided about new children of Anchor (including new biological children, adopted children, stepchildren, and possible children that were missed at Wave 1).

For the G-module, the following letter combinations were used (for additional information see sections 6.3.1 through 6.3.6).

- L1 Information provided about the parent-in-law of Anchor who was randomly selected at Wave 1
- L2 Information provided about the parent-in-law of Anchor who was randomly selected at Wave 2 if Anchor had a new partner
- FP Information provided about the current partner of the father of Anchor¹⁸
- MP Information provided about the current partner of the mother of Anchor¹⁹.

¹⁵ Note that the Wave 1 partner might be an ex-partner at Wave 2. The variable BNEWPART can be used to verify this.

¹⁶ See note 15

¹⁷ See note 15

¹⁸ Note that the current partner might be a different person than at Wave 1. The variables BNEWFP and BNEWMP can be used to verify this.

6.2 Constructed variables

In this version of the codebook, we only report on the constructed demographics. As noted earlier, the next version will also detail weights, occupations and Alter status.

6.2.1 Demographics

A set of constructed variables, similar to the constructed variables added in Wave 1, was added to the data file. However, a number of changes were made in comparison to Wave 1:

- No variables were constructed for the response to the interview questionnaire (variables *ARESPONS* and *APARTIAL* in Wave 1), since the dataset did not include interviews that were terminated halfway through.
- No variables regarding the characteristics of the migrant-sample respondents were constructed. This included variables *ASPVA*, *AHEAD*, and *ASPVAMUN*.
- No variables were constructed regarding information whether (new) children from the Anchor were twins.

The following new variables were constructed:

BMOVED	Did Anchor move since the last interview?
	1 No
	2 Yes
BTYPE	NKPS (main-sample) or SPVA (migrant-sample) respondent
	1 NKPS
	2 SPVA
BVERSION	Pilot or main study?
	0 Pilot study
	1 Main study
BMODE	Mode of interview
	1 CAPI
	2 CAWI
	3 CATI

¹⁹ See note 18.

BRECORD	Interview recorded on tape
1	Yes
2	No
BRECPERM	Permission from Anchor to record on tape
1	Yes
2	No
BRECRES	Result of recording
1	Completely or almost completely recorded
2	Hardly recorded

6.2.2 Geographic information

During the course of the interview, Anchors were requested to provide the postal code of the addresses of family members, a selected friend/acquaintance, their current workplace and their former workplace. Partners who filled in a self-completion questionnaire provided the postal code of the address of their current workplace. A set of geographic codes was assigned to the postal codes: (a) municipality, (b) province, (c) degree of urbanization of the municipality, and (d) X and Y coordinates. Geographic codes were *not* added for people living in the Anchor's home. For Wave 2, new variables were created to indicate Anchor's place and country of residence: BPLACRES and BCOUNRES. For the new Alters in Wave 2, see chapter 6.1.2 for details, geographic variables were also created. These are included in the list below.

BPLACRES	Place of residence Anchor
BCOUNRES	Country of residence Anchor
BGEMRES	CBS municipality code Anchor
BB601G	CBS municipality code Anchor age 15
BC111G	CBS municipality code current partner
BL109G	CBS municipality code Anchor if not at home
BL209G	CBS municipality code previous address
BM318G	CBS municipality code workplace
BX602GF	CBS municipality code father
BX602GM	CBS municipality code mother
BX602GC1	CBS municipality code child 1 ... to
BX602GC9	CBS municipality code child 9
BX602GD1	CBS municipality code child 10 ... to

BX602GD3	CBS municipality code child 12
BX602GGC	CBS municipality code grandchild
BX602GP1	CBS municipality code ex-partner (CP in Wave 1)
BX602GE	CBS municipality code most recent ex-partner
BX62GFL1	CBS municipality code father in law (Wave 1)
BX62GML1	CBS municipality code mother in law (Wave 1)
BX602GP2	CBS municipality code new partner
BX602GN1	CBS municipality code new child....to
BX602GN6	CBS municipality code new child
BX62GFL2	CBS municipality code father in law new partner
BX62GML2	CBS municipality code mother in law new partner
BX602GFP	CBS municipality code father's partner
BX602GMP	CBS municipality code mother's partner
BX602GS1	CBS municipality code sibling 1 ... to
BX602GS9	CBS municipality code sibling 9
BX602GT1	CBS municipality code sibling 10 ... to
BX602GT9	CBS municipality code sibling 18
BX602GU1	CBS municipality code sibling 19 ... to
BX602GU4	CBS municipality code sibling 22
BX602GFR	CBS municipality code friend
BX705GM	CBS municipality code mother if absent
BX705GC1	CBS municipality code child 1 if absent
BX705GC2	CBS municipality code child 2 if absent
BX705GC3	CBS municipality code child 3 if absent
BX705GC4	CBS municipality code child 4 if absent
BX705GC5	CBS municipality code child 5 if absent
BX705GML	CBS municipality code mother in law if absent
BX705GH1	CBS municipality code household member 1 if absent
BX705GH2	CBS municipality code household member 2 if absent
BX705GH3	CBS municipality code household member 3 if absent
BX705GH4	CBS municipality code household member 4 if absent
BX705GS1	CBS municipality code sibling 1 if absent
BX705GS6	CBS municipality code sibling 6 if absent
BSCP79G	CBS municipality code partner's workplace

NOTE: Value labels have been added. The same codes were used for the variables BGEMRES through BSCP79G. CBS codes of municipalities existing in the year 2006 were used. Variables from the BX705 series were only included if there was at least one case with a non-missing value (also for province, urbanization, coordinates).

BPROVRES	Province Anchor.
BB601P	Province Anchor age 15
BC111P	Province current partner
BL109P	Province Anchor if not at home
BL209P	Province previous address
BM318P	Province workplace
BX602PF	Province father
BX602PM	Province mother
BX602PC1	Province child 1 ... to
BX602PC9	Province child 9
BX602PD1	Province child 10 ... to
BX602PD3	Province child 12
BX602PGC	Province grandchild
BX602GP1	Province ex-partner (CP in Wave 1)

BZIPY etc: the same series for Y coordinates.

The X and Y coordinates were derived from the *Rijksdriehoeksmeting* (RD; Netherlands National System). This system is measured in meters and has its (0,0) point in France. The implication is that (a) coordinates are always positive and (b) for any given point, the Y coordinate is always larger than the X coordinate.

Of the 6655 Anchor postal codes in the NKPS file, 99.8% were coded on the basis of the 6-digit postal codes. If the postal code was unknown, the coordinates for the centroid of the municipality were taken; these were provided by the Department of Geography, Planning and Development Studies of the University of Amsterdam. The municipality information and the province information are provided by CBS-data in 2006, the *Buurткаart 2006* and were supplemented by CBS Statline.

A difference between Wave 1 and Wave 2 is that a new program provided the X and Y coordinates, namely Bridges. Whereas Geodan (the program in Wave 1) derived the coordinates using the midst of the street, Bridges counts the blocks of houses in the street. Given the difference in methods, the coordinates provided by the two companies may differ a few meters. However, this is not likely to affect our variables, as all coordinates are rounded to hundred meters (for privacy reasons) and are provided in kilometers²⁰. Distances in kilometers in a straight line can be calculated using Pythagoras's theorem. For example, distance from Anchor's home to mother's home in SPSS syntax language: `compute dist = sqrt(((bzipx - bx602xm)**2) + ((bzipy - bx602ym)**2)).`

6.3 Matching Alter information across waves, modules and questionnaires

In Wave 2, like in Wave 1, Anchors provided detailed information about Alters (family members and to a lesser extent non-family members). Information on most of these Alters was also collected in Wave 1. However, extensive information is gathered on a number of Alters on whom little or no information was collected during Wave 1. What adds to the complexity of these Alter data is that they are scattered across modules of the questionnaire. In addition, again just like in Wave 1, information on Survey Alters is available from self-completion questionnaires²¹.

Users of the NKPS dataset will want to match information on specific Alters from these different modules and questionnaires. In this section we describe how to perform such matching operations. Attention will be paid to the nature of the Alters in Wave 2, to what extent they were already present in Wave 1, and to how to link Alter data from Wave 2 to Alter data from Wave 1. In

²⁰ Note that the X and Y coordinates of the Anchors were always calculated using the new program, irrespectively of whether they had moved, but the x and y coordinates of Alters were only calculated by the new program when they had actually moved. Due to the different calculation methods, distances between Anchors and Alters may therefore be slightly different, even when both did not move house.

²¹ Note that the term 'Alter' is used to refer to family members and friends/acquaintances, and that the term 'Survey Alter' is used to refer to family members who were selected to fill in self-completion questionnaires.

addition, the general procedure to match Alter information across modules of the Anchor questionnaire within Wave 2 is described. At this point, no information is provided on linking Alter data across questionnaires for Survey Alters, as questionnaires from Survey Alters will only be added to the dataset in a later release.

In Wave 2, information on the same family and non-family members (Alters) was collected on whom information was also collected in Wave 1. In general, in Wave 2 the same conventions were used that were developed for Wave 1 (see section 8.4 of version 1 of the Wave 1 Codebook for details). For instance, demographic information on siblings was stored within the X-module. As Anchors had up to 22 siblings, their information was stored in variables that have S1-S9 (for the nine oldest siblings), T1-T9 (for the next nine siblings) and U1-U4 (for the last four siblings) as their last two characters. In Wave 2 the same logic was used, so data on sibling S2 in Wave 1 and on sibling S2 in Wave 2 refer to the same sibling. The same logic applies to data collected on a subset of Alters in module G. For instance, data on support exchanges between Anchor and Child A collected in Wave 1 can directly be compared to data on these same issues in Wave 2. In both instances, variables relating to child A have KA as their last two characters. Below, we will describe how to match data of different types of Alters from Waves 1 and 2.

6.3.1 Current and ex-partner(s)

Information on the current partner is collected in the C-module and in the G-module. In the G-module, variable names with information on the current partner end with the characters CP, just as in Wave 1. It should be noted that CP data in Wave 1 and Wave 2 only pertain to the same person if Anchor still has the same partner. The variable BNEWPART can be used to verify this. In the X-module, information on the partner in Wave 1 is stored in variables with names ending on P1, whereas information on the new partner in Wave 2 is stored in variables with names ending on P2.

In Wave 1, demographic information on ex-partners was collected if the respondent had lived together with this partner. On the last of these ex-partners, demographic information was collected once again in Wave 2. Ex-partner data in Wave 2 are stored in variables with names ending with E.

6.3.2 Parents

Information on the parents of Anchor is collected in the B-, G- and X-modules. In the G- and X-modules, variable names with information on the Anchor's father end with the character F and on the Anchor's mother with M, just as in Wave 1.

6.3.3 Current partner of parents

In Wave 2 more information than in Wave 1 on the current partner of Anchor's parents has been collected. If the biological parents were not living together in Wave 1, only demographic information on the current partner of the parents was collected. In Wave 2, additional information was collected on the current partner of the parents in the G-module. The variable names of the respective variables end with MP (mother's partner) or FP (father's partner). In Wave 2, a parent might be living with another partner than in Wave 1. The variables BNEWMP and BNEWFP indicate whether these Alters are the same persons as in Wave 1 or not.

6.3.4 Parents-in-law

In Wave 2 the same information on parents-in-law as in Wave 1 has been collected. Demographic information is provided in the X-module, and support exchange information is collected on one of the parents-in-law in the G-module. If Anchor had a partner in Wave 1, information on the parents-in-law are collected, even if the relationship with this partner has ended. In addition, if the Anchor has a new partner, information on the new in-laws is collected. In the X-module, information on the 'old' parents-in-law is stored in variables ending with FL1 and ML1, and information on the 'new' parents-in-law is stored in variables ending with FL2 and ML2. In the G-module, information on one of the 'old' parents-in-law is stored in variables ending with L1 and information on one of the 'new' parents-in-law is stored in variables ending with L2. The variable BG10011 stores information on whether the data in the G-module relate to the 'old' mother-in-law or to the 'old' father-in-law, and the variable BG10012 stores information on whether the data in the G-module relate to the 'new' mother-in-law or to the 'new' father-in-law.

6.3.5 Siblings

In Wave 2 the same information on siblings as in Wave 1 has been collected. Demographic information is provided in the X-module, and support exchange information is collected on two siblings in the G-module. These siblings are the same as those selected in Wave 1. In the X-module, variable names that contain information on siblings end on S1-S9, T1-T9 or U1-U4, depending on the rank number of the sibling. These names correspond to those in Wave 1. For instance, if information on a certain sibling was stored in variables with names ending with S3 in Wave 1, the variables with names ending with S3 in Wave 2 contain information on the same sibling. In the G-modules, the variable names with information on siblings end with SA and SB, respectively. Again, sibling A in Wave 2 is the same sibling as sibling A in Wave 1, and the same goes for sibling B. To determine which siblings in the X-module correspond to siblings A and B in the G-module, variables

BGXRELSA and BGXRELSB can be used. Variables BGXRELSA and BGXRELSB tell which of the siblings (S1-S9, T1-T9, U1-U4) correspond to sibling A and sibling B, respectively.

6.3.6 Children

In Wave 2 information on children already reported on in Wave 1 has been collected. Demographic information is provided in the X-module, and support exchange information is collected on two children in the G-module. These children are the same as those selected in Wave 1. In the X-module, variable names that contain information on siblings end on C1-C9, and D1-D3, depending on the rank number of the child. These names correspond to those in Wave 1. For instance, if information on a certain child was stored in variables with names ending with C6 in Wave 1, the variable names ending with C6 in Wave 2 contain information on the same child. In the G-modules, the variable names with information on children end with KA and KB, respectively. Again, child A in Wave 2 is the same child as child A in Wave 1, and the same goes for child B. To determine which children in the X-module correspond to children A and B in the G-module, variables BGXRELKA and BGXRELKB can be used. Variables BGRELKA and BGXRELKB tell which of the children (C1-C9, D1-D3) correspond to child A and child B, respectively.

In Wave 2, questions have also been posed on (a) children born since Wave 1 and (b) children who may have been alive at Wave 1, but on whom the respondent inadvertently did not report in Wave 1. This latter situation might have arisen in the NKPS-SPVA sub-sample. Demographic information on these ‘new’ children have been stored in the X-module in variables with names that end on N1-N6.

6.3.7 Grandchild

In Wave 1, demographic information on one of the grandchildren was collected. In Wave 2, information on that same grandchild has been collected once again. If no information on a grandchild was collected in wave 1, but Anchor had a grandchild at the time of Wave 2, information on one of these ‘new’ grandchildren is collected. Demographic information on this grandchild is stored in the X-module in variables with a name ending of GC.

6.3.8 Friends/acquaintances

In Wave 1, in the G-module questions were posed on support exchange with one randomly chosen friend/acquaintance. In Wave 2, demographic information and support exchange information on this same person was collected once again. Both in the X- and in the G-module, data on this friend/acquaintance is stored in variables with names ending with FR.

6.4 Known problems

6.4.1 Leaving home

By listening to audiotapes, we realized that question BB617 might give rise to confusion. It consisted of two parts: ‘Have you lived independently of your parents/carers ever since or did you ever go back and live in the parental home for a consecutive period of six months or more?’. The answer ‘yes’ to the first part is the opposite of the answer ‘yes’ to the second part. The routing of the interview questionnaire was based on the answer to the first part. The answer ‘yes’ (which on the screen was described as ‘yes, have always lived independently’ brought the respondent to a set of questions on partnerships. The answer ‘no’ (which on the screen was described as ‘no, ever returned home again’ led to question BB618: ‘In which year did you last leave the parental home to start living on your own?’). For those who inadvertently answered ‘no’ to the second part, the age of leaving home is provided. For those who inadvertently answered ‘yes’ to the second part, information on the period during which they returned to the parental home is missing. It is impossible to assess how many respondents inadvertently responded to the second part of question BB617 rather than the first.

6.4.2 New children

Maximum numbers were imposed for the reporting of new children in the X-module: six for new children with the Wave 1 partner, six for new children with a partner acquired since Wave 1 with whom the Anchor is still involved, five for stepchildren from a partner acquired since Wave 1 with whom the Anchor is still involved, and two for new children with a partner acquired since Wave 1 with whom the Anchor is no longer involved. This restriction was problematic for two respondents. Respondent 4360 reported 8 new stepchildren, and respondent 20404 reported 6 new stepchildren.

6.4.3 Suspect quality

On the basis of listening to audio tapes and the evaluations of the interviewers, we concluded that respondents with the family numbers listed below had major difficulties understanding the questionnaire. They required much assistance throughout the interview and had trouble with pre-structured answer categories. The family numbers are: 4360, 6685, 11484, 12193, 21993, 23282, 23566, 25977, 29097, 29171, 30539, 35501, 37057, 39611, 2010565, 2408773, 2507841, 2507898, 2570921, and 3007453.

6.4.4 Self-completion questionnaire

There are differences, primarily for technical reasons, between the paper-and-pencil and the web versions of the self-completion questionnaire. See sections 3.1.3 and 3.1.4 for details.

6.5 Partial non-response

Most question series (scales and other sets of items) of the self-completion questionnaires had only a few missing values (see Table 6.1). On average, over 90% of respondents had valid responses for all questions in a particular set. The items pertaining to general evaluations of one's family (e.g. 'Should I need help, I can always turn to my family') showed the highest rate of item non-response. This finding is probably linked to the relatively large number of items in the set (it consisted of 26 items).

Note that the web-version of the self-completion questionnaires did not allow missing values: all responses were forced choice. For that reason, the middle columns of Table 6.1 pertain to paper-and-pencil self-completion questionnaires only, which provide a more veridical account of item non-response. 88.5% of main sample respondents filled in the paper-and-pencil version of the self-completion questionnaire. Given the problems involved in creating web-versions of the self-completion questionnaire in Turkish and Arabic, migrant-sample respondents did not have the option of a web-version of the self-completion questionnaire. A comparison of the two groups shows higher levels of item non-response among the migrant respondents.

Table 6.1. Non-response per question series (percentages)

Question series	Main sample overall ^c		Main sample paper-and-pencil		Migrant sample paper-and-pencil	
	No missing values	All missing	No missing values	All missing	No missing values %	All missing %
<i>Family</i>						
BS4a – BS4z ^a	88.9	0.2	87.4	0.2	84.8	0.2
<i>Family ties</i>						
BS6a – BS6h	95.7	0.6	95.1	0.7	94.5	0.7
<i>Partner relationship</i>						
BS8a – BS8e ^b	90.4	1.4	89.1	1.6	86.5	3.2
<i>Partner support</i>						
BS9a – BS9e ^b	96.6	1.5	96.2	1.7	92.7	3.0
<i>Family contact</i>						
BS24a – BS24p	95.4	1.1	94.8	1.3	91.0	1.1
<i>Opinions</i>						
BS28a – BS28o	94.9	1.0	94.2	1.1	90.5	1.7

<i>Problems</i>						
BS34a – BS34g	97.8	1.0	97.6	1.2	96.0	1.8

^a Based on respondents with at least one family member.

^b Based on respondents with a partner.

^c Both web and paper-and-pencil self-completion questionnaires.

Appendix 1: Introductory letter to main-sample respondents

Re: Survey of Family ties in the Netherlands

Dear Sir / Madam,

About three years have passed since you took part in a study of family ties in the Netherlands. The study yielded valuable information, such as the finding that families are in flux, but are not changing as dramatically as generally believed.

We are now conducting a follow-up among all participants in this study and would like to know what has happened over the past three years and how you would now describe your family ties.

As you indicated three years ago that you would be willing to participate in a follow-up study, we would like to ask you whether you would agree to being interviewed again. We will first call you to ask whether you are able to take part in the study. If you are, the interviewer will get in touch with you to arrange a time for an interview at your home.

The interview will take about an hour of your time. The interviewer will enter your answers into a laptop. As a token of our appreciation, you will receive a gift voucher worth € 10. After all interviews have been conducted, we will put up for raffle three travel vouchers among all participants (1 x € 500 and 2 x € 250). We will also send you a summary of the results, as we did after the first survey.

All information provided will of course be anonymous. Your name and address will be stored separately from the research results and will never be passed on to others.

For more information about the study, please see the brochure enclosed. You will also find further details on our website: www.nkps.nl.

The survey is being conducted in cooperation with GfK fieldwork agency. Should you have any further questions, please feel free to contact GfK during office hours at the toll-free telephone number 0800-022 94 00 or by e-mail: familie@nkps.nl.

Thank you for your cooperation.

With kind regards,

Professor Pearl Dykstra

Appendix 2: Introductory letter to migrant-sample respondents

Re: Survey of Family ties in the Netherlands

Dear ,

About three years have passed since you took part in a study of family ties in the Netherlands. This is the first and only large-scale study of family relationships in the Netherlands in which people of both Dutch and non-Dutch descent were interviewed. We are now conducting a follow-up among all participants in this unique study and would like to know what has happened over the past three years and how you would now describe your family ties.

It is important once again that as many people of Dutch and non-Dutch descent take part in this follow-up survey as ethnic background makes a considerable difference when it comes to family relationships. Only if both groups are well represented can we accurately chart family ties in the Netherlands. As you indicated three years ago that you would be willing to participate in a follow-up to the study, we sincerely hope that you will agree to being interviewed again. An interviewer will get in touch with you soon.

The interview will take about an hour of your time. The interviewer will enter your answers into a laptop. As a token of our appreciation, you will receive a gift voucher worth € 10. After all interviews have been conducted, we will put up for raffle three travel vouchers among all participants (1 x € 500 and 2 x € 250). We will also send you a summary of the results, as we did after the first survey.

All information provided will of course be anonymous. Your name and address will be stored separately from the research results and will never be passed on to others.

For more information about the study, please see the brochure enclosed. You will also find further details on our website: www.nkps.nl.

The survey is being conducted in cooperation with GfK fieldwork agency. Should you have any further questions, please feel free to contact GfK during office hours at the toll-free telephone number 0800-022 94 00 or by e-mail: familie@nkps.nl.

Thank you for your cooperation.

With kind regards,

Professor Pearl Dykstra

Encl: Brochure 'Family ties in the Netherlands'

Appendix 3: Source of scales

Information on the source of scale measures is provided in the table below. The items listed in the table pertain to the *self-completion Anchor questionnaire*. Selected items were also used in other NKPS-questionnaires (e.g. the Survey Alter self-completion questionnaires).

Items	Scale	Source
4A – 4D	Feelings about family	NKPS
4E – 4G	Help from family	NKPS
4H – 4M	Family characteristics	NESTOR-LSN 1992
4N – 4Q	Reliance on family	NKPS
4R – 4U	Reliance on friends	NKPS
4V – 4Z	Family versus friends	NKPS
5A – 5D	Motives help family	NKPS
6A – 6H	Closeness family	NKPS
8A – 8E	Support partner	NKPS
9A – 9E	Conflicts partner	SIN 1998
10A – 10D	Quality partner relationship	NKPS
11A – 11E	Division homemaking tasks	SIN 1998
13A – 13D	Activities with children	SIN 1998
14A – 14D	Division childrearing tasks	NKPS
16A – 16D	Work orientation	NKPS
21A1 – 21A6	Division homemaking tasks parents at age 15	NKPS
21B1 – 21B5	Division childrearing tasks parents at age 15	NKPS
21C1 – 21C4	Attachment to mother at age 15	NKPS
21D1 – 21D4	Attachment to father at age 15	NKPS
21E1 – 21E4	Abusive behavior mother in childhood	Adopted from Straus, 1979; Straus, 1997
21F1 – 21F4	Abusive behavior father in childhood	Adopted from Straus, 1979; Straus, 1997
24A – 24D	Family responsibility expectations	NKPS
24E – 24H	Filial responsibility expectations	Hamon & Blieszner, 1990 Seelbach & Sauer, 1977

Items	Scale	Source
24I – 24L	Parental obligations	NSFH 1987-88
24M – 24P	Parenthood	HIN 1995, PSIN 1987-1999, MOAB 2000
27A – 27C	Parental socialization values	Alwin, 1984; Alwin & Krosnick, 1885; Jansen, 1983; Kohn, 1977
28A – 28G	Partner relationship norm	NKPS
28H – 28K	Gender role norm	HIN 1995, PSIN 1987-1999
28L – 28O	Work obligation norm	Ten Have & Jehoel-Gijsbers, 1985
30A – 30D	State versus family	NKPS
31A – 31D	Postmaterialism	Inglehart, 1977; Inglehart & Abramson, 1999
32A – 32E	MHI-5	Berwick et al., 1991; Ware & Sherman, 1992; Ware et al., 1993
33A – 33K	Loneliness	De Jong Gierveld & Van Tilburg, 1999
35E – 35H	Personal competence	Van Wel & Hortulanus, 2002
35I – 35L	Exchange-communal orientation	Clark et al., 1987
35M – 35P	Satisfaction with life	Diener et al., 1985; Pavot & Diener, 1993

Appendix 4: Reliability of scales

Item numbers	Scale	N of items	Cronbach's alpha
			Main Sample
4A – 4D	Feelings about family	4	0.658
4E – 4G	Help from family	3	0.716
4H – 4M	Family characteristics	6	0.804
4N – 4Q	Reliance on family	4	0.900
4R – 4U	Reliance on friends	4	0.914
4V – 4Z	Family versus friends	5	0.743
6A – 6H	Closeness family	8	0.824
8A – 8E	Support partner	5	0.862
9A – 9E	Conflicts partner	5	0.643
10A – 10D	Quality partner relationship	4	0.948
16A – 16D	Work orientation	4	0.759
21A1 – 21A6	Division homemaking tasks parents at age 15	6	0.636
21B1 – 21B5	Division childrearing tasks parents at age 15	5	0.768
21C1 – 21C4	Attachment to mother at age 15	4	0.941
21D1 – 21D4	Attachment to father at age 15	4	0.937
21E1 – 21E4	Abusive behavior mother in childhood	4	0.777
21F1 – 21F4	Abusive behavior father in childhood	4	0.795

24E – 24H	Filial responsibility expectations	4	0.754
24I – 24L	Parental obligations	4	0.787
24M – 24P	Parenthood	4	0.828
28A – 28G	Partner relationship norm	7	0.778
28H – 28K	Gender role norm	4	0.782
28L – 28O	Work obligation norm	4	0.737
32A – 32E	MHI-5	5	0.853
33A – 33K	Loneliness	11	0.872
35E – 35H	Personal competence	4	0.861
35I – 35L	Exchange-communal orientation	4	0.535
35M – 35P	Satisfaction with life	4	0.835

Appendix 5: List of new variables in Wave 2

New items in the interview-questionnaire

Module A

None.

Module B

None.

Module C

BC026A-BC026H Questions related to possible break-up with partner from Wave 1.

Module D

None.

Module E

None.

Module F

BF003 Importance of friend to Anchor

Module G

BG408 Did Anchor help Alter with childcare?

BG505F-BG505H Questions about possible conflicts with Alter

BG601A-BG601I Questions about possible problems suffered by Alter

BG602-BG604 Questions about health and possible handicaps Alter

Module H

None.

Module I

None.

Module J

None.

Module K

BK209B Did anchor receive heritage after death of parents/a parent?

Module L

None.

Module M

BM205-BM239_X Questions about changes in jobs/hours worked since Wave 1.

BM317B: Travel time to work

BM813D Partner's travel time to work

BM816-BM820 Income partner from benefits

Module N

BN203-BN204 Religiosity at time of leaving parental home

BN250A-BN267E Being a migrant in the Netherlands (for the migrant sample only)

BN268A-BN268N Relationships considered as family (migrant sample members only; this information was collected among main sample members in Wave 1)

Module O

None.

Module X

BX604A Contact with parent via text messaging or chatbox

New items in self-completion questionnaire Anchor

These question sequences are in the Wave 2 self-completion questionnaire but were in the Wave 1 interview questionnaire:

BS6A1-BS6H1	Nuclear/extended family ties
BS10A1-BS11A1	Joint family activities
BS14A1	Whether children join family activities
BS14B1	Anchor currently in education?

New questions:

BS11B1-BS11E4	New questions on marital history
BS14C1BS14W8	New questions on employment history
BS17A1-BS17F2	Time spent on activities homemaking
BS21A1-BS21A6	Division homemaking tasks between parents at age 15
BS21B1-BS21B5	Division of childrearing tasks between parents at age 15
BS21C1-BS21D4	Attachment to parents at age 15
BS21E1-BS21F4	Parental abuse at age 15
BS35Q1-BS35W8	Residential history
BS35Y1	Date completion questionnaire

Appendix 6: Descriptive statistics

		N	Minimum	Maximum	Mean	Std. Deviation
FAMNUM	family identification number	6670	4.00	9999997.00	334644.72
